

CLAIMS

What is claimed is:

- 1 1. A tool for cleaning a watercraft speedometer, comprising:
2 a body;
3 an extraction tip extending outwardly from the body, wherein the extraction
4 tip is dimensioned to fit within an intake cavity; and
5 an edge formed in the extraction tip and capable of catching matter in the
6 intake cavity.
- 1 2. A tool as recited in Claim 1, wherein the extraction tip further comprises a plurality of
2 edges that catch and withdraw matter when the tool is removed following insertion into the
3 intake cavity.
- 1 3. A tool as recited in Claim 1, wherein the extraction tip has a length approximately
2 equal to that of the intake cavity.
- 1 4. A tool as recited in Claim 1, wherein the extraction tip comprises a drill affixed in the
2 body.
- 1 5. A tool as recited in Claim 4, further comprising a securable and removable closure
2 that covers the extraction tip when the closure is secured to the tool.
- 1 6. A tool as recited in Claim 1, further comprising a securable and removable closure
2 that covers the extraction tip when the closure is secured to the tool.

1 7. A tool as recited in Claim 1, further comprising a removable closure having a
2 plurality of female threads that mate with corresponding male threads formed on the body,
3 wherein the closure covers the extraction tip when the closure is threadedly secured to the
4 body.

1 8. A tool as recited in Claim 1, further comprising a removable closure having a
2 plurality of female threads that mate with corresponding male threads formed on the body,
3 wherein the closure covers the extraction tip when the closure is threadedly secured to the
4 body, and wherein the body further comprises a hole for accepting a floatation device.

1 9. A tool as recited in Claim 1, wherein the extraction tip further comprises one or more
2 rearwardly projecting barbs that catch and withdraw matter from the intake cavity when the
3 tool is removed following insertion into the intake cavity.

1 10. A tool as recited in Claim 1, wherein the body is a pin vise.

1 11. A tool for cleaning a watercraft speedometer, comprising:
2 a manually graspable body element having a proximal end and a distal end;
3 and
4 a drill bit affixed in and extending outwardly from the distal end of the body
5 element.

1 12. A tool as recited in Claim 11, wherein the drill bit has a length approximately
2 equivalent to that of an intake cavity of a watercraft speedometer.

1 13. A tool as recited in Claim 11, further comprising a securable and removable closure
2 that covers the drill bit when the closure is secured to the tool.

1 14. A tool as recited in Claim 11, wherein the drill bit has a length approximately equal to
2 that of the intake cavity.

1 15. A tool as recited in Claim 11, further comprising a removable closure having a
2 plurality of female threads that mate with corresponding male threads formed on the body
3 element, wherein the closure covers the drill bit when the closure is threadedly secured to the
4 body element.

1 16. A tool as recited in Claim 11, further comprising a removable closure having a
2 plurality of female threads that mate with corresponding male threads formed on the body
3 element, wherein the closure covers the drill bit when the closure is threadedly secured to the
4 body element, and wherein the body element further comprises a hole for accepting a
5 floatation device.

1 17. A tool for cleaning a watercraft speedometer, comprising:
2 means for manually grasping the tool; and
3 means for extracting matter from an intake cavity of the watercraft
4 speedometer, wherein the extraction means is sized to fit in the intake
5 cavity, wherein the extraction means is affixed to the manual grasping
6 means.

1 18. A tool as recited in Claim 17, wherein the extraction means further comprises means
2 for catching and withdrawing matter from the intake cavity when the tool is removed
3 following insertion into the intake cavity.

1 19. A tool as recited in Claim 17, wherein the extraction means comprises a drill bit
2 affixed in the manual grasping means.

1 20. A tool as recited in Claim 17, further comprising means for covering the extraction
2 means, wherein the covering means is securable to and removable from the tool.

1 21. A tool as recited in Claim 17, further comprising means for covering the extraction
2 means, wherein the covering means is securable to and removable from the tool, and wherein
3 the covering means comprises a plurality of female threads that mate with corresponding
4 male threads formed on the manual grasping means, wherein the covering means further
5 comprises a cavity for accepting a floatation device.

1 22. A tool for cleaning a watercraft speedometer, comprising:
2 a manually graspable cylindrical body having male threads formed on each of
3 a proximal end and a distal end of the body;
4 a drill bit affixed in and extending outwardly from the distal end of the body;
5 and
6 a removable closure having a plurality of female threads that mate with the
7 male threads formed on the proximal end and the distal end of the
8 body, wherein the closure covers the drill bit when the closure is
9 threadedly secured to the threads of the distal end of the body.

1 23. A tool as recited in Claim 22, wherein the drill bit has a length approximately equal to
2 that of an intake cavity.

1 24. A tool as recited in Claim 22, wherein the closure further comprises a hole for
2 accepting a floatation device.
